

1010 SOLID-X

TROWELABLE EPOXY MORTAR

Designed for strength and durability, 1010 Solid-X Trowelable Epoxy Mortar is a three-component 100% solids epoxy mortar developed for structural floor repairs. It features a compressive strength greater than concrete and trowelability with minimal shrinking for seamless repairs. This product is ideal for repairing holes or damaged concrete floors in high-traffic areas in residential, commercial, and industrial spaces.

1010 Solid-X Trowelable Epoxy Mortar can be used for repairing floor defects too large for resin-only products or concrete where the repair needs to be formed such as large spalls, trenches, joint reconstruction, curb repair, building ramps, coving, and more.

We developed this product with our proprietary blend of polymers, curing agents, and structural quartz sand, 1010 Solid-X Trowelable Epoxy Mortar features a low odor, no VOC formulation that is resistant to most chemicals. Simply mix it, apply it to the concrete with a trowel, and let it dry for an hour. There's no grinding or smoothing necessary, allowing floors to be repaired quickly and efficiently.

Self-priming, the 1010 Solid-X Trowelable Epoxy Mortar doesn't need a primer or a topcoat unless desired to match a floor color or prior to applying epoxy or polyaspartic floor coating.

FEATURES & ADVANTAGES

- High Solids
- Zero VOC / Low Odor
- Fast Cure
- Stronger than concrete
- Excellent resistance to most chemicals
- South Coast AQMD compliant
