5073 POLYASPARTIC

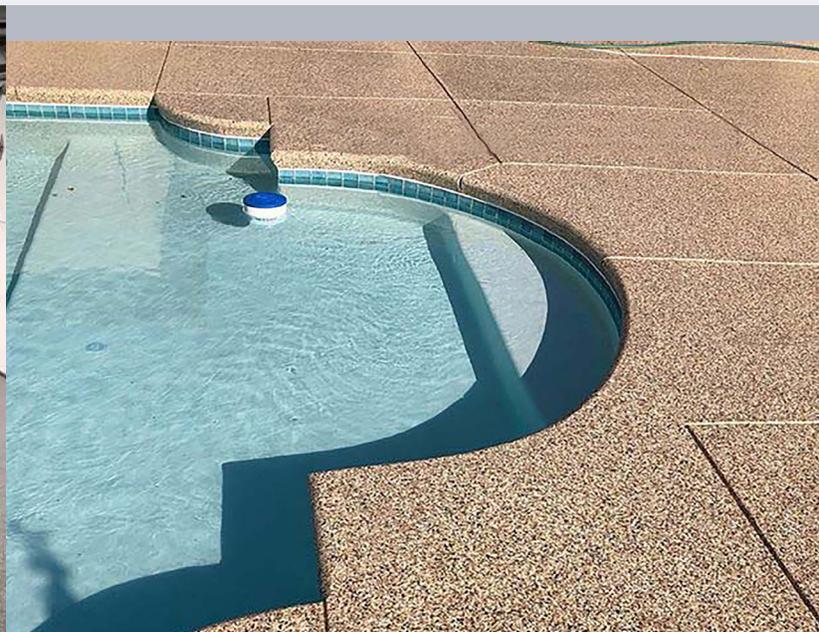

FAST-DRYING CLEAR TOPCOAT

5073 Polyaspartic Fast-Drying Clear Topcoat is designed for use over two-component concrete floor coatings and a wide range of other concrete floor coatings and stains. 5073 Polyaspartic is 73% solids and allows film thickness to build in excess of traditional systems with water clarity and mirror-like smoothness and gloss. It has a lower viscosity that makes it easy to apply while providing an even longer pot life and a faster cure when applied onto the surface. The cross-linking of the 5073 series film in the cure makes it exceptionally tough and

durable, maintaining its gloss far beyond that of comparable systems. Much attention has been given to the application characteristics in its formulation. As a result, 5073 Polyaspartic Fast-Drying Clear Topcoat is extremely user-friendly without having to sacrifice the performance of the finished product. The applications for this product are almost limitless. 5073 is suited for use on high-end residential applications, industrial, commercial, and retail settings with high traffic or food service areas where stain resistance and cleanability are paramount.

FEATURES & ADVANTAGES

- Fast drying
- 4 X more abrasion resistant than epoxy
- Low-VOC
- High-gloss
- High-build in one coat
- Great resistance to most chemicals
- Non Yellowing
- Will cure at temperatures just above freezing
